

Experience the newest revolution in data visualization and clinical trial analytics with our new Business Intelligence tool. Users have the ability to slice and dice data in real-time and create reports, graphs and dashboards to provide clearer, more accurate insights. Our cloud based platform is fully integrated with ThoughtSphere's full line of solutions and can also be offered as a standalone solution.

Key Components

Data Sources

- Combine data across data sources
- Support for relational and non-SQL sources of data
- Support for RDBMS and standard SQL data sources

User Friendly Interface

- Self service data loading
- Ability to manually slice and dice data
- Increased control over data

Data Visualization

- Create visually stunning reports, graphs, and dashboards with ease
- Various chart types for data analysis available out of box

Data Analysis

- Slice and dice data from multiple sources and formats to provide for a more comprehensive data analysis
- Dynamic filters at data source and chart level
- Seamless integration with ClinACT RBM tool

Product Features

Data Visualization

- Create Reports, Graphs and Dashboards
- User friendly web interface to design and build data visualization components
- Data from multiple SQL and no-SQL data sources can be combined and rendered
- Allows exporting of data for analysis in external tools such as Excel etc.

Enhanced Insight

- Slice and dice data in real time to gain richer insights
- Recognize and analyze trends and risk factors

Seamless Data Control

- Empowers end users with simplistic manipulation tools to create visually aesthetic reports
- Draw conclusions from multiple data sources including EDC, lab, and clinical data
- Dashboards allow user enhanced control over data to create valuable cross

Cloud-based solution that allows you to take your visualizations with you
